No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1981 articles are the same as those shown for current articles.

AUTHOR INDEX FOR VOLUME 5 374

The Subject Index for Volume 5 will appear in the November 1981 issue as part of a cumulative index for the year 1981.

Instructions to Authors

Plasmid has been developed in response to the emergence of extrachromosomal gene systems as a coherent and very active field of biology and of the consequent need for a specific medium of communication therein. The primary content of the Journal will thus be reports of original research into the biology of extrachromosomal gene systems, in prokaryotic and eukaryotic organisms, including their biological behavior, their molecular structure and genetic function, and their specific products.

Plasmid encourages the preparation of short, highly focused review articles summarizing recent progress in highly active areas of research involving extrachromosomal gene systems. Authors wishing to prepare such a review should submit a short proposal, including an expected date of submission, to the Editor-in-Chief.

Manuscripts should be submitted in triplicate to the Editor-in-Chief or any one of the Editors. (See inside front cover for addresses). Authors are required to submit three copies of each manuscript. In all cases, at least two copies of all half-tone prints are required. For line drawings, originals or prints are required for the top copy and photocopies will suffice for the second and third.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in PLASMID represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editors and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of manuscript. Manuscripts should be typewritten (not mimeographed), with wide margins on high-quality bond paper, using double or triple spacing throughout. Subdivision of articles into Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, and References is recommended. The manuscript must begin with an Abstract. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given (also see *Recombinant DNA* below). Reviews of the literature should be restricted to closely pertinent papers. Tables, figures, names, quotations, and bibliography (and all text references to the same) should be carefully checked for errors. A proposed running head of no more than 37 characters should be included.

Figures and tables. Number all figures consecutively with Arabic numbers and give each one a descriptive legend. All illustrations should be submitted in such form as to permit photographic reproduction without retouching or redrawing. Line drawings should be professionally drafted and planned to fit the proportions of the printed page (5½ × 8 inches; column width, 2½ inches). Lettering on drawings should be large enough to take a reduction of 50 to 60%.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. The photographs should be cropped to eliminate background material so that reproduction might be possible without reduction. Grouping of photographs should be indicated. For best reproduction provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction.

With respect to half-tone prints, authors are reminded that they are responsible for ensuring that the quality of the print is sufficient to ensure clear reproduction. This refers especially to photographs of gels and electron micrographs. In case of doubt, Academic Press will be happy to provide advice.

Tables should be typed on separate pages, numbered consecutively with Arabic numbers, and collected at the end of the manuscript. All tables must have descriptive headings and should be understandable without reference to the text. Footnotes to tables should be typed directly beneath the tables.

References. Names of authors should be mentioned in the text with the year of publication in parentheses. References should be listed alphabetically at the end of the paper as follows:

Bawden, F. C., and Kassanis, B. (1954). Some effects of thiouracil on virus-fected plants. *J. Gen. Microbiol.* **10,** 160–173.

Williams, C. A., and Chase, M. W. (1971). Photography of precipitates in gels. *In* "Methods in Immunology and Immunochemistry" (C. A. Williams and M. W. Chase, eds.), Vol. 3, pp. 326–328. Academic Press, New York.

See, however, the instructions for Short Communications below. The names of journals should be abbreviated according to the Chemical Abstracts Service Source Index (1969).

Include in the reference list articles that are "in press," but incorporate in text or use footnotes for "manuscripts in preparation," "unpublished observations," and "personal communications."

Abbreviations and symbols. The author is asked to follow the usage established by "A Proposal for a Uniform Nomenclature in Bacterial Genetics" (Demerec *et al.*, *Genetics* **54,** 61, 1966); and "Uniform Nomenclature for Bacterial Plasmids: A Proposal" (Novick *et al.*, *Bacteriol. Rev.* **40,** 168, 1975). Abbreviations for units should follow the Système Internationale.

Nomenclature of microorganisms. Binomial Latin names, with authorities, should be used in accordance with the International Rules of Nomenclature. Binomials should be underlined in the typewritten copy. A specific name should not be used without an accompanying capitalized generic name. The generic name for each species should be written in full where it first occurs in the text, and again in the summary. Where the generic name appears frequently in the text it may be abbreviated by using the initial letter.

Recombinant DNA. In reports of experiments involving recombinant DNA generated *in vitro* and covered by the National Institutes of Health (U. S.) Guidelines for Research Involving Recombinant DNA Molecules, the author(s) must state what safety precautions were used in the performance of these experiments. For example, ". . . experiments were carried out under P2 contaminant conditions as specified by the National Institutes of Health (U. S.) Guidelines for Research Involving Recombinant DNA Molecules."

Short Communications. This section is open to short preliminary reports of important findings. They should not exceed six double-spaced typewritten pages including tables and illustrations. Do not use any section headings except Acknowledgments and References. All Short Communications must have abstracts. Illustrative material should be kept to a minimum (usually not more than one table or figure). References should be given serial numbers in the text and listed consecutively at the end of the text (serial number, author, name of journal, volume, first and last page, and year of publication).

This section does not provide an accelerated means of publication, but is designed to offer the opportunity to present in brief form noteworthy results of works in progress.

Proofs. Galley proofs will be sent to the author with a reprint order form. Authors will be charged for excessive alterations.

Reprints. Fifty copies of each article are granted free of charge and authors may order additional quantities using the reprint order form provided with the galley proofs.
